RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 248 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1898 Excerpt: . . . W G in thickness, and if inches external diameter, with the exception of those of the bottom row, which are 4 inches diameter. The sides of the furnace are of fire-brick, lined with fire-tiles. The boiler is enclosed by a light casing, formed of two thin flanged plates, with asbestos millboard between them, on the outside of which is a light cleading having an air-space between it and the casing proper. The front and rear Fig. 331. --Water-tube marine boiler by Babcock and Wilcox, Limited, London. casings are in the form of doors to permit inspection of the headers. The heating-surface of the boiler is 1000 square feet, the area of the fire-grate is 24 square feet, and the ratio of the fire-grate surface to the heating-surface is 1 to 417. This boiler is suitable for a triple-expansion engine of 270 indicated horse-power. When supplying steam to triple-expansion engines, 3J square feet of heating-surface are usually provided in this boiler per indicated horse-power: and from n to 12 indicated horse-power are assumed to be developed per square foot of fire-grate surface per hour with natural draught. When supplying steam to compound, or double-expansion engines, from 4s to 5 square feet of heating-surface are usually provided per indicated horsepower; and from 9 to 10 indicated horse-power are assumed to be developed per square foot of fire-grate surface per hour with natural draught. Fig. 332. --Water-tube marine boiler by Laird Bros. , Birkenhead. With forced draught, or an...
